

HOW TO INSTALL WALL LIGHTS ON ANY SURFACE

Handcrafted wall lights from Barn Light Electric add both safety and curb appeal to your home or business. Your new gooseneck or wall sconce can be mounted to most any building although some irregular surfaces may require a mounting block to provide a level mount for the fixture. Most carpenters can craft a mounting block to complement your particular style, but mounting blocks are also available at home improvement stores. A qualified electrician can easily install your wall light, with or without a mounting block, to the façade as shown below.

INSTALLED FIXTURES WITH A MOUNTING BLOCK

INSTALLED FIXTURES WITHOUT A MOUNTING BLOCK

What if my electrician cut the junction box rough-in too large?

Great question! A mounting block can not only hide the error but will also provide a level surface for mounting your new fixture.
